

## select name from sakila.language

1. Review the tables in the database.
2. Explore tables by selecting all columns from each table or using the in built review features for your client.

Select \* from skill

1. Select one column from a table. Get film titles.

select title from sakila.film

1. Select one column from a table and alias it. Get unique list of film languages under the alias language. Note that we are not asking you to obtain the language per each film, but this is a good time to think about how you might get that information in the future.

select name from sakila.language

```
SELECT name AS language
FROM sakila.language;
>>English
>>Italian
>>Japanese
>>Mandarin
>>French
>>German
```

1.
